MPE Calculations:

Limit used:

- Occupational / Controlled Exposure
- X General Population / Uncontrolled Exposure

$$\text{MPE Limit} = 1 \text{ (mW/cm}^2\text{)}$$

$$\text{PowerDensity(mW / cm}^2\text{)} = \frac{\text{EIRP}}{4\pi d^2}$$

Given: **EIRP** in *mW* and **d** in *cm*

EIRP (mW)	Distance (cm)	Power Density (mW/cm ²)	Limit (mW/cm ²)	Power Density (W/m ²)	Limit (W/m ²)
1.77	20	0.0003513	1.0	0.00003513	10

**Statement of Compliance:**

This device demonstrates compliance under the operating conditions specified in this document. Under normal operating conditions, the antenna is designed to be installed in accordance with the manufacturer's instructions in such a manor to maintain the minimum separation distance. The MPE calculations shown above demonstrate compliance to the provisions of US and Canadian requirements.

As can be seen from the MPE results, this device passes the specified limits at a distance of 20 cm at the maximum output power under normal operating conditions.
